

In Exercises 1–9, find the product.

1. $(x + 7)^2$ 2. $(2w - 3)^2$ 3. $(4q + 2)^2$ 4. (n + 4)(n - 4)5. (v - 7)(v + 7)6. (5x + 2)(5x - 2)7. (6 + a)(6 - a)8. $(\frac{1}{3} + p)(\frac{1}{3} - p)$ 9. (x + 2y)(x - 2y)

In Exercises 10–12, use special product patterns to find the product.

- **10.** $19 \bullet 21$ **11.** $49 \bullet 51$ **12.** 33^2
- **13.** Describe and correct the error in finding the product.

$$(x-5)^2 = x^2 - 5^2$$

= $x^2 - 25$

14. A contractor modifies the size of a kitchen.

- **a.** The area of the room after the modification is represented by (30 + x)(30 x). Find the product.
- **b.** Use the polynomial in part (a) to find the area when x = 6. Which room has the larger area, the original room or the new room? Explain.

In Exercises 15 and 16, find the product.

15.
$$(x^2 + 5)(x^2 - 5)$$
 16. $(y^4 - 2)^2$
