Error Analysis Criteria

To earn the full 50 points for your error analysis assignment, you must complete the following:

- For the problem section, there must be something more than just the #.
- The corrections section must show all work/steps. It does not have to be exactly correct for you to earn credit for that problem but it must show ALL work.
- For your action plan, you must write what you will do to help with your understanding, what you will make sure to do next time, or you must write a note to yourself.

    Good examples:
        "I will make a flash card for point slope form."
        " I will make sure that when graphing a line, I start on the y-axis and not the x-axis."
        "Remember that a negative times a negative gives you a positive."
    Not acceptable examples:
        "Solve it better."
        "Do it right next time."

Please also remember that all problems that you did not receive full credit on should be completed within the error analysis.

ERROR ANALYSIS

Problem	Corrections	Action Plan
# _____		NTS/Next time I will...
